About our Products

Flux is a graphically rich, modular acoustic wall panel system that is beautiful and inventive. It offers a visually sophisticated solution to the problem of unwanted noise within contemporary public, residential and commercial interiors including meeting rooms and offices, hotels, bars and restaurants, and reception areas.

The Flux system is based on a template of eight sections that have been overlaid and arranged to create a gallery of twelve designs offering varying degrees of visual order. Colour and finish are used to create unique bold statements or understated backdrops for each interior project.

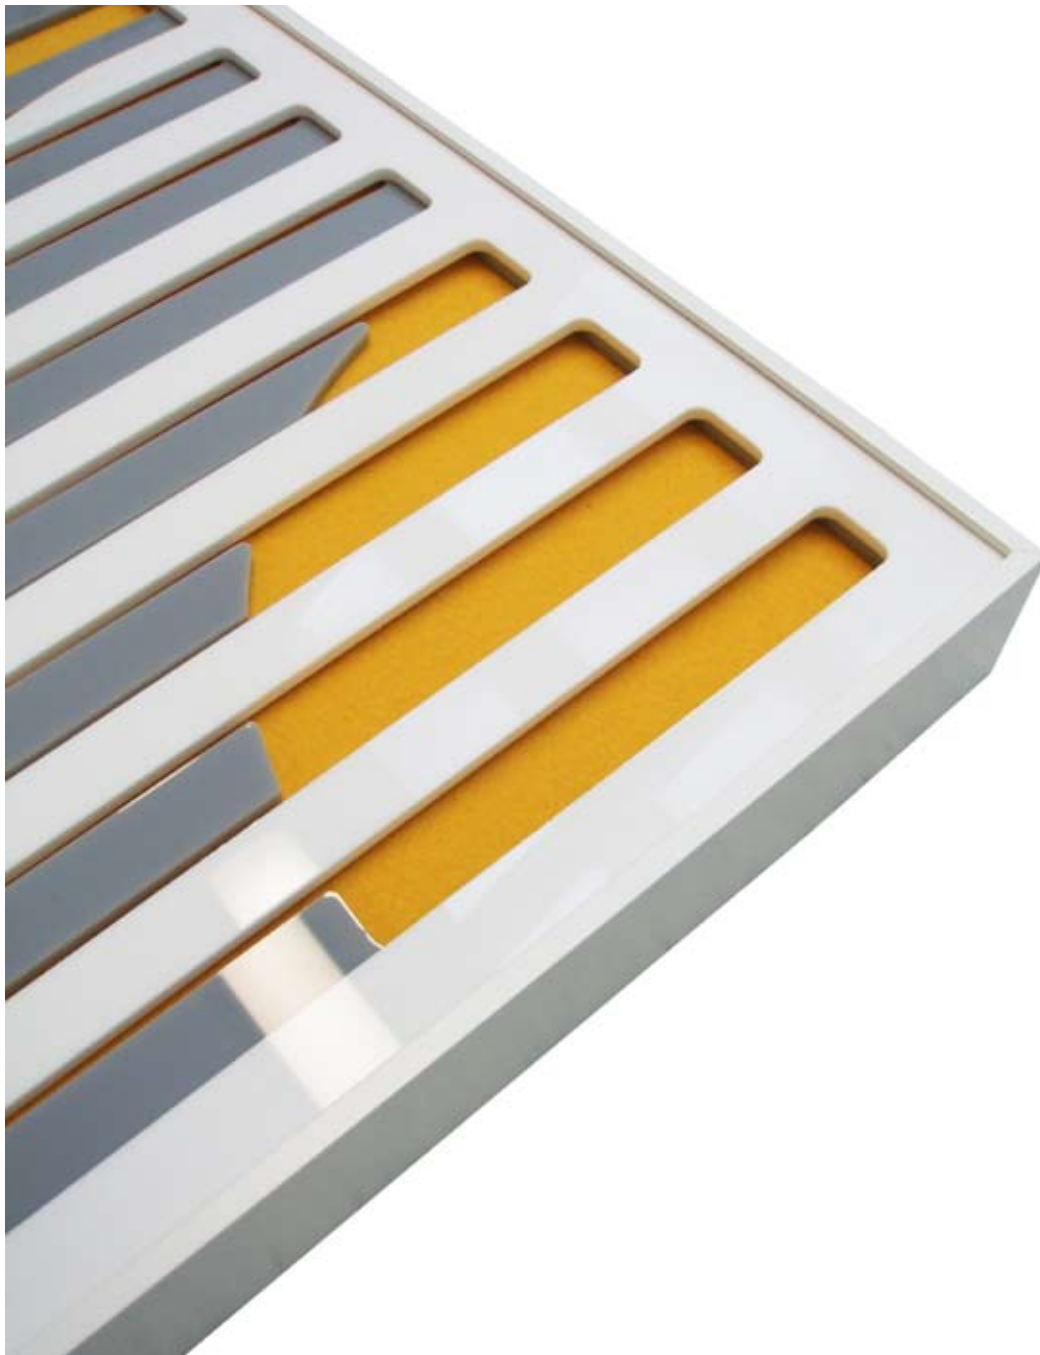

Enquiries for bespoke projects are welcomed.

About us

Friends of Wilson design consultancy uses fresh design thinking to produce acoustic wall products that mediate between design, craft and art.

We explore the use of abstract shape and form in interior architecture and our approach is based on the belief that we respond intuitively to the shape and form of designed things around us, as they reflect our emotional needs for excitement, risk, balance and order.

We have an extensive background in product and interior design, so enjoy working with our clients on how best to incorporate our products for the success of their project.

Introducing Flux

Flux modular wall panels consist of an outer wood frame encasing a sound absorbing foam base, a 100% wool felt covering, and layers of laser-cut Perspex acrylic on the surface.

Design options

Flux panels can have either a single or double layer laser-cut acrylic design. A unique slot-in system with a magnetic lid on the frame allows the layers in each panel to be rotated and changed to create different designs, even after installation.

Installation

Panels use a concealed split-batten system for hanging, and guidelines are provided. Installation is not included.

Panel size

500x500x50mm

750x750x50mm

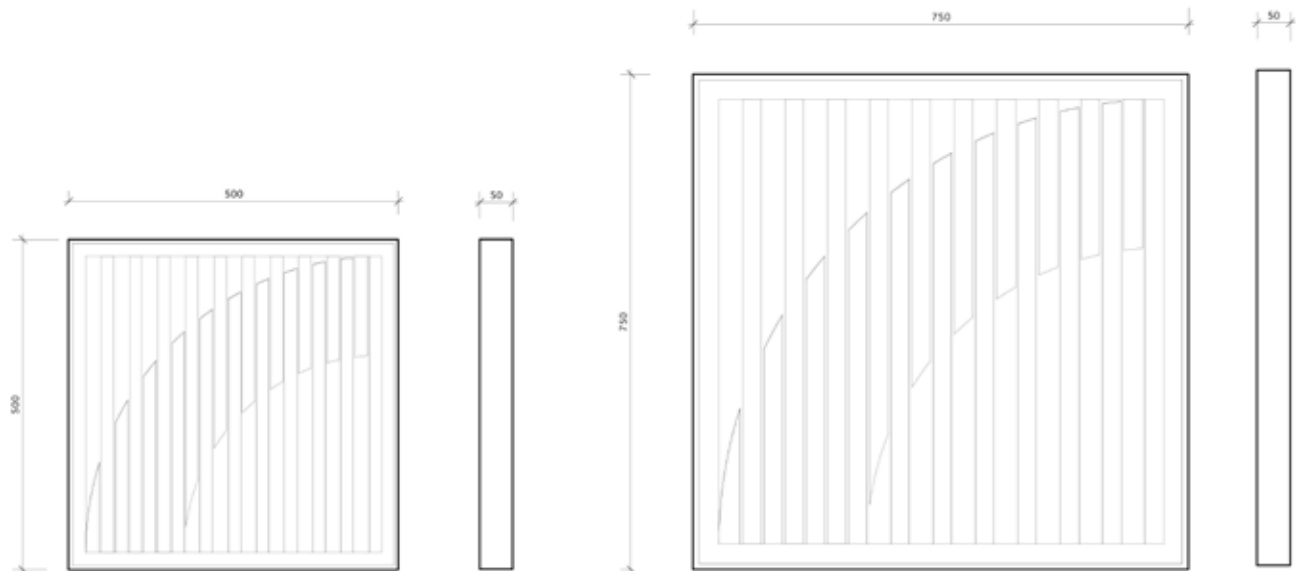

Max Weight

3kg

6.5kg

Materials and acoustic properties

- 5mm Perspex Acrylic™ has a high gloss surface with outstanding clarity that comes in an extensive range of solid and transparent colours. <http://www.perspex.co.uk/downloads> Layers have an open design that allows sound to pass through to acoustic materials beneath.
- 3mm German-milled 100% wool felt has natural acoustic insulation properties, and is a water-resistant, self-extinguishing, biodegradable and renewable material. It comes in 58 highly saturated and lightfast Pantone-Matching System (PMS) colours.
- 25mm non-flammable acoustic foam forms the base, with optimum sound absorbent properties.
- Wood frames come in white silk lacquer finish, with other colours to special order.

One to watch

FRIENDS OF WILSON

WHO: Founded in 2009 by product designer Lynne Wilson, Friends of Wilson specialises in acoustic wall panels and installations for use in commercial, public and residential interiors.

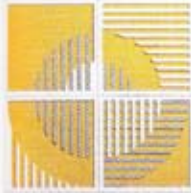

Wilson has had a successful 15 years so far as a product interior and 3D designer since her student days. Her work includes the Loopy Table (right), in production since Wilson designed it in 1996 while at Edinburgh College of Art.

WHY: Most acoustic panels are designed to blend into the background, but Friends of Wilson panels can be used to enhance an interior design scheme. The bold and distinctive patterns come in an assortment of colours, making them suitable for a wide range of interiors.

WHERE: friendsofwilson.com

WHAT: Flux versatile modular acoustic wall panels in wool felt and acrylic. Available in bright colours or muted tones, Flux has interchangeable sections, enabling different versions to be created from the same design, even after installation. Panels contain sound-absorbent foam and can be adapted to suit a variety of acoustic requirements.

Friends of Wilson is working with Michael Wolk Design Associates in Miami on the installation of its panels in the reception area of the Trump International Beach Resort Hotel there. More products are due from Friends of Wilson in the new year.

FABRICS & WALLCOVERINGS

Friends of Wilson

Flux is a graphically rich, acoustic wall panel. Its layered, abstract forms use wool felt and acrylic in bright colours or muted tones to create bold statements or understated backdrops, suitable for a wide range of commercial and residential interiors. The design is modular with panels that use interchangeable sections, enabling different versions to be created from the same design, even after installation. Design, colour and finishes are used to create a unique and effective sound absorber for each interior space. Panels are available in different sizes. www.friendsotwilson.com
